Project Overview

LegalEase is an AI-assisted legal document drafting application. It combines a Streamlit frontend, FastAPI backend and Google Gemini generation service. Users provide document details and receive a draft that can be reviewed, edited and exported.

Field	Details
Objective	Simplify creation of initial legal document drafts using Generative AI.
Scope	Generate common legal-document drafts from structured user input and provide export options.
Problem	Manual drafting and formatting can be repetitive and time-consuming.
Approach	Validate inputs → call Gemini → display result → edit → export.
Key Features	AI generation, preview, editing, TXT/DOCX/PDF export, health endpoint, error handling.
Responsible Use	Generated text should be reviewed by an appropriate legal professional before use when legal validity is important.
