

Brainstorming & Idea Prioritization

[illegible]

Maximum Marks: 5 Marks

Project Concept

LegalEase is a Generative AI-powered web application that creates draft legal documents from structured plain-language inputs. It is designed to reduce the effort required to prepare common document drafts while keeping the user in control of the final content and allowing export in TXT, DOCX and PDF formats.

Brainstorming Ideas

S.No	Idea	Problem Addressed	Priority
1	AI Legal Document Generator	Manual drafting is time-consuming and difficult for non-experts.	High
2	Legal document summarizer	Long legal text can be difficult to review.	Medium
3	Clause explainer	Users may not understand individual clauses.	Medium
4	Legal document comparison	Comparing versions manually takes time.	Low
5	Legal checklist assistant	Users may forget common document sections.	Medium

Prioritized Idea

LegalEase was selected because the submitted code already implements the core generation workflow, a FastAPI backend, a Streamlit interface, Gemini integration, document editing, and three export formats.
