

Scalability & Future Plan

[illegible]

Maximum Marks: 1 Mark

Current System Limitations

Limitation	Impact	Priority
External Gemini dependency	Generation depends on API availability and supported model names.	High
No persistent database	Documents are not stored as user history.	Medium
Limited automated testing	Regression coverage can be improved.	Medium
No production authentication	Suitable primarily as a prototype/demo workflow.	Medium

Scalability Plan

Aspect	Current State	Proposed Upgrade
User Load	Local/small-scale	Deploy behind scalable application hosting.
Data Storage	No database	Add secure document metadata/history database.
Performance	API response dependent	Caching, async processing and load testing.
Security	Environment secret configuration	Authentication, authorization, audit logging and stronger secret management.

Future Roadmap

Phase	Enhancement	Expected Impact
Phase 2	Document history and user accounts	Better continuity and usability
Phase 3	Clause explanation, templates and document comparison	Broader legal-assistance workflow
Phase 4	Production deployment, automated testing and monitoring	Improved reliability and maintainability
